PROFILE

Cloud/DevOps Engineer with hands-on experience in AWS, Azure, Terraform, Docker, Ansible, Prometheus, and Grafana through internships and project assessments. Proficient in CI/CD pipelines, infrastructure automation, containerization, and cloud monitoring with a focus on scalable and reliable DevOps practices.

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, IAM, VPC, ECS, Fargate, Lambda, Load Balancer, CloudWatch), Azure

Containerization & IaC: Docker, Docker Swarm, Docker Compose, Terraform, Ansible

CI/CD & Monitoring: Jenkins, GitHub Actions, Prometheus, Grafana, Amazon CloudWatch

Security & Databases: OWASP Dependency Check, Trivy | PostgreSQL, MongoDB, Redis

Other: Git, GitHub, Python (Basic), Linux

EXPERIENCE

DevOps Intern – PearlThoughts

Mar 2026 – Apr 2026

- Deployed AWS infrastructure using Terraform — VPC, subnets, NAT Gateway, EC2, and security groups across dev and production environments.
- Automated PostgreSQL setup, user creation, and privilege management via Ansible; managed containerized services with Docker and Docker Swarm.
- Built Prometheus and Grafana dashboards to monitor PostgreSQL performance and system metrics; diagnosed and resolved deployment and connectivity issues.

AWS & DevOps Trainee – Softleoai Pvt. Ltd.

Dec 2025 – Mar 2026

- Worked with EC2, S3, IAM, VPC, Load Balancer, and Lambda; provisioned cloud infrastructure using Terraform modules and GitHub automation workflows.
- Executed CI/CD pipelines using GitHub Actions; packaged applications with Docker; deployed a Python app on EC2 and hosted static websites on Amazon S3.

PROJECTS

Full-Stack Containerized Deployment – DevOps Company Assessment | [\[GitHub\]](#) | Docker · Jenkins · AWS ·

Prometheus · Grafana · CI/CD

- Completed a 3-level DevOps challenge (FusionPact) covering cloud deployment, observability, and CI/CD automation end-to-end.
- Containerized frontend and backend using Docker Compose with persistent volumes; deployed both services publicly on AWS.
- Configured Prometheus to scrape /metrics and built Grafana dashboards tracking CPU, memory, request rate, latency, and errors; automated full pipeline via Jenkins.

Blue-Green Deployment on AWS with Terraform | [\[GitHub\]](#) | Terraform · AWS · Docker · ALB · Zero-Downtime

- Deployed a zero-downtime blue-green architecture on AWS — dual environments (VPC, EC2, ALB) provisioned entirely via Terraform modules.
- Automated traffic switchover via Jenkins pipeline on successful builds; containerized the application with Docker for repeatable deployments.

Cost-Optimized ECS Fargate Deployment with Spot Instances | [\[GitHub\]](#) | AWS ECS · Fargate Spot · Terraform ·

Docker

- Deployed a containerized application on ECS Fargate Spot using Terraform, reducing compute costs while maintaining availability and rolling updates.

Multi-Environment AWS Infrastructure (Dev/Prod) | [\[GitHub\]](#) | Terraform · AWS · Ansible · Prometheus · Grafana

- Provisioned isolated Dev and Prod AWS environments (VPC, EC2, subnets, NAT) from a single Terraform codebase; automated database configuration via Ansible.
- Set up Prometheus and Grafana dashboards for full observability across both environments with zero manual console configuration.

EDUCATION

B.Tech in Computer Science Engineering – Chandigarh Engineering College, Landran

2021 – 2025

CERTIFICATIONS

- AWS Academy – Cloud Operations
- AWS Academy – Data Engineering
- DevOps Bootcamp – TWS
- Python Training – Infosys
